Titles

Accelerated wear testing of PTFE composite bearing materials 65
Adhesive wear of lubricated contacts: 1. Model, 2. Prediction of adhesive wear in a lubricated sliding system, 3. Experimental verification 169
Acoustic emission source location to on-line condition monitoring of anti-friction bearings, The application of vibration signature analysis and 51
Anti-friction bearings, The application of vibration signature analysis and acoustic emission source location to on-line condition monitoring of 51
Application of vibration signature analysis and acoustic emission source location to one-line condition monitoring of anti-friction bearings, The 51
Aseismic bearing pads 107
Ballbearing cage pockets, Hydrodynamic design of 15
Boundary lubrication with anti-wear additives: study of interface film formation by electrical contact resistance 209
Comparative investigation of the performance of a three-lobed journal bearing 219
Comparative tribological evaluation of journal bearings 112
Comparison of flooded and directed lubrication tilting pad thrust bearings 251
Cutting fluids, Thin layer activation for testing 277
Cylinder liner materials, A review of piston ring and 79
Design of profiled taper roller bearings 269
Diesel engines: Aspects of manufacture and performance, Piston rings for slow and medium 3
Directed lubrication tilting pad thrust bearings, Comparison of flooded and 251
Effect of mechanical properties of frictional behaviour of metals 265
ehl film thickness, Further developments in the inductive measurement of 215
Electrical contact resistance, Boundary lubrication with anti-wear additives: study of interface film formation by 209
Evaluation of some traction fluids with a four-roller machine 255
Experimental re-examination of kinetic friction, An 261
Filtration, Improving utilisation of potential i.c. engine life 127
Flooded and directed lubrication tilting pad thurst bearings, Comparison of 251
Fracture mechanics approach to rolling contact fatigue, A 115
Friction, An experimental re-examination of 261
Frictional behaviour of metals, Effect of mechanical properties on 265
Frictional behaviour of non-Newtonian lubricants 76
Friction materials for overload clutches 155
Further developments in the inductive measurement of ehl film thickness 215
Grease-lubricated spiral groove bearings 131
Hydrodynamic design of ballbearing cage pockets 15
Hydrostatic screw and nut, The self-regulated 185
Improving utilisation of potential i.c. engine life by filtration 127
Inductive measurement of ehl film thickness, Further developments in the 215
Infections in oil and emulsions, Some health aspects of 161
Journal bearing, Comparative investigation of the performance of a three-lobed 219
Journal bearings, Comparative tribological evaluation of 112
Journal bearings under dynamic loading conditions, A thermohydrodynamic solution for finite 225
Lubricant behaviour during upsetting at different temperatures 123
Machine condition monitoring – Sources of equipment and services S1
Micro-defects on machined carbon steel surfaces 165
Non-Newtonian lubricants, Frictional behaviour of 76
Non-Newtonian lubricating films, Performance of thrust bearings operating with 31
Optimum grease quantity for roller bearing lubrication 21
Overload clutches, Friction materials for 155
Performance of thrust bearings operating with non-Newtonian lubricating films 31
Piston ring and cylinder liner materials, A review of 79
Piston rings for slow and medium speed diesel engines: Aspects of manufacture and performance 3
Precise wear screening machine, A 180
Prosthesis, Wear and fatigue tests on an all-metal Co-Cr-Mo prototype shoulder 120
PTFE composite bearing materials, Accelerated wear testing of 65
Research report – Tribology research at University College, Cardiff 93
Review of piston ring and cylinder liner materials, A 79
Roller bearing lubrication, optimum grease quantity 21
Roller bearings, Design of profiled taper 269
Self-regulated hydrostatic screw and nut, The 185
Some health aspects of infections in oil and emulsions 161
Spiral groove bearings, Grease lubricated 131
Surface coatings: Materials conservation and optimum tribological performance 203
Thermohydrodynamic solution for finite journal bearings under dynamic loading conditions, A 225
Thin layer activation: Current applications to wear and corrosion measurements and future potential in studies of surface treatment and sputtering 60
Thin layer activation for testing cutting fluids 277
Thrust bearings operating with non-Newtonian lubricating films,
